Jasper4Oracle Server

The perfect replacement for Oracle's Reports Server

- Server for JasperReports®

- Easy Forms integration with Forms API (PL/SQL)

- File formats: PDF, Word, Excel, OpenOffice

- File download/display, email, printing

- Database connection with Forms user

- No additional application server

Jasper4Oracle Server

The perfect replacement for Oracle's Reports Server

Oracle Reports is no more supported and many Oracle Report users are switching to JasperReports®.

The integration of the JasperReports® server requires many Forms-Application adjustments. For example, the OpenSource JasperReports® server does not support the email or printing output formats.

The use of the Jasper4Oracle Server greatly simplifies integration into existing Forms projects:

With a PL / SQL Forms API, the adjustments in Forms are minimal. Using a parameter, the output file format can be specified e.g. email or printing. With the output file format, a browser is opened from Forms in which, for example, the PDF is displayed.

Jasper4Oracle server also provides execution statistics and logging.

TEAM

Modern software, partnership and trust create successful solutions.

Please contact us. We are looking forward hearing from you.

Further offers regarding to JasperReports®:

- JasperReports® Trainings and Workshops for Oracle developers

- Mentoring as support for JasperReports® Startup

- Migration tools for the migration from Oracle Reports to JasperReports®
