ProStore[®] module VR Training

Employee training in virtual worlds

- Individual adaptation to your processes
- Reduced training time
- Very high employee acceptance
- Overcoming language barriers through visualisation
- Targeted training of error-prone activities

Virtual Reality with ProStore®

Live training of operational logistics processes

The ProStore® VR Training module opens up the potential of virtually trained employees for intralogistics

Training via „Virtual Reality“ (VR) enables employees to acquire processes not only theoretically, but also to test and consolidate them directly in practice. When training with VR glasses, full physical effort is required - performed VR sequences are experienced directly and therefore immediately internalised.

The ProStore® VR Training uses the latest second generation VR glasses which, with their responsiveness, display quality and comfort, allow you to immerse yourself without any prior knowledge or preparation. The IT processes of your warehouse are integrated and thus virtually displayed.

With VR Training your employees experience, recognise and train actively and virtually the order picking processes directly from your warehouse.

**Modern software, partnership and trust
create successful solutions.**

Please, contact us. We are looking forward to hearing from you.

Live demonstration of ProStore® VR Training
